

Final Project Proposal

For my final project, I would like to develop a simple IOS app that can be used as an online Pastry Shop!

I want the app to be able to show the pastries that are available for sale (with photos), the ingredients used in the pastries, and the prices. I also want the user to be able to create an account in the app and to be able to save their payment details, the delivery address, and earn points for every purchase. In addition to that, I would like to create a page where the user can write their reviews and communicate with the admin. I think the most challenging part might be syncing the data to the Wi-Fi (?), and figuring out how to connect in-App payments to the designated banks.

I will be creating structs/classes for each of the pages, like "Main Menu", for each of the pastries available, "Payment and Delivery Page", "Log-In Page", "My Account", "Reviews and Feedback", "About" etc. I hope to at least build the basic working version of an app, and if I finish it quite early I will try to fully develop it!
