Challenges:

1. I wish I could have narrowed it down to the RecipeApp earlier, so I would have had more time to master it and make a very practical and convenient recipe book app!

2. I was very confused with the images: the sizes and formats, it took me a while to convert everything to the standards that XCode would accept.

3. I have learned how to make multi-line text fields that would be scrollable and saveable. It took quite a time, research, and Justin's time, but I am happy that I have learned it and made it work!
